

TAKARA BIO INC.

Takara Bio Inc.

address Otsu Seta 3-4-1, Japan

TEL 077-543-7231

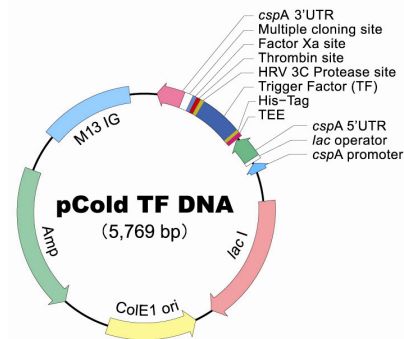

FAX 077-543-9254

URL <http://www.takara-bio.com>

Takara Bio manufactures and sells research reagents and scientific instruments used by biotechnology researchers around the world, as well as providing contract research services to these researchers. In addition to providing research reagents and equipment to the life science research market, Takara Bio has active research and product development activities in the fields of gene and cell-based therapy, and agricultural biotechnology.

More information is available at <http://www.takara-bio.com>.

Cold Shock expression vector pCold® DNA series

• Sales & marketing of reagents and instruments for life science research

• Protein expression vectors

Cold shock expression vector, pCold DNA series

(Expression at a low temperature achieves efficient recovery of protein of interest, by minimizing the production of protein originating from the host.)

• Kits and reagents for protein extraction/purification, detection and analysis

• Reagents and instruments for PCR and real time PCR

• Cloning kits (e.g. In-Fusion cloning kit .)

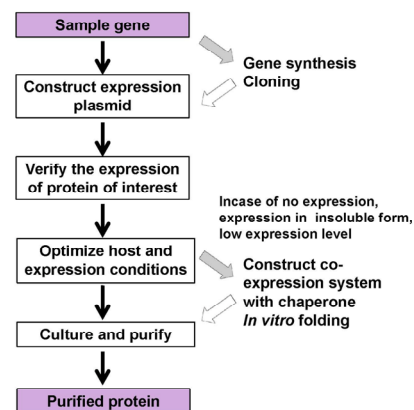

• Gene transfection reagents

Various custom services for research

• Custom protein expression service

Total coverage of protein expression; from the best optimized gene synthesis, construction of expression vector, optimization of conditions for expression, and up to purification of protein of interest

Custom Protein Expression Service

Takara Bio offers successful solutions to researchers through;

- Advanced products and services supported by technologies
- Reliable and qualified solutions based on long-term achievements
- Wide range of services covering total support
